

TASK 3

For Web Development Interns

Dear Interns,

Good Evening, I Hope Everyone is Doing Good!!

The Below Is your Task 3, Please Read carefully and Understand the Requirement.

Everyone should Take Atleast one Module and Make it Perfect. Before Taking any Module Please communicate with all the team Members, Make Good Discussion atleast for 30min -1hr for Taking any Module and Based on your Capabilities which you can Do Take the Module Accordingly.

I WILL CREATE A MEET LINK AND ALL SHOULD JOIN THE MEET AND ALL THE DISCUSSION SHOULD BE MADE UNDER OUR SURVEILLANCE, EVERYONE SHOULD DISCUSS ONE AFTER ANOTHER.

Task 2:

Smart Job Portal

Module 1: User Authentication & Core Infrastructure

- * Intern Focus: Security, foundational setup, and shared services.
- * Responsibilities:
 - * User Registration (Job Seeker, Recruiter, Admin).
 - * User Login/Logout.
 - * Password Management (forgot/reset).
 - * Backend API setup and routing for all user auth.
 - * Database schema design for users table.
 - * Implementation of JWT or session-based authentication.
 - * Setting up environment variables and basic server configuration.
 - * Crucial for: All other modules will depend on this for user identity.

Module 2: Job Seeker Profile Management & Dashboard

- * Intern Focus: Job Seeker's personal data and initial entry point.
- * Responsibilities:
 - * Frontend UI for Job Seeker Profile (Personal Info, Education, Experience, Skills, Portfolio, Resume Upload).
 - * Backend APIs for CRUD operations on Job Seeker Profiles.
 - * Database schema design for job_seeker_profiles and related tables (skills, education, experience).
 - * Job Seeker's main dashboard UI (showing profile summary, initial recommendations, application status placeholders).

- * Crucial for: Job recommendations, conditional visibility, and application process.

Module 3: Recruiter Company Profile & Job Posting

- * Intern Focus: Recruiter's ability to manage their company and post jobs.
- * Responsibilities:
 - * Frontend UI for Recruiter Company Profile (name, description, logo).
 - * Frontend UI for Job Posting form (title, description, requirements, skills, location, salary, type, deadline).
 - * Backend APIs for CRUD operations on company_profiles and job_postings.
 - * Database schema design for company_profiles and job_postings.
 - * Recruiter's main dashboard UI (showing posted jobs, basic applicant count).
- * Crucial for: The core content of the portal (jobs).

Module 4: Job Search, Filtering & Details

- * Intern Focus: How job seekers find and view jobs.
- * Responsibilities:
 - * Frontend UI for Job Search interface (search bar, filters).
 - * Frontend UI for Job Listings display.
 - * Frontend UI for individual Job Details page.
 - * Backend APIs for searching and filtering jobs from the database.
 - * Tricky Part (Frontend/Backend Coordination): Implementing the Conditional Job Visibility based on Job Seeker's skills and location preferences (requires integrating with Module 2's data).
- * Crucial for: Job Seeker core experience.

Module 5: Job Application & Real-time Status Tracking.

- * Intern Focus: The application process and real-time updates.
- * Responsibilities:
 - * Frontend UI for applying to a job (button, potentially attach specific resume/cover letter).
 - * Backend API for submitting job applications.
 - * Database schema design for applications table (linking job seeker, job, recruiter, and status).
 - * Frontend UI for Job Seeker to view their applied jobs and Real-time Application Status Tracking.
 - * Tricky Part: Implement WebSockets (e.g., Socket.IO) for real-time status updates from the backend to the job seeker's dashboard when a recruiter changes status.
- * Crucial for: The core interaction between job seekers and recruiters.

Module 6: Recruiter Applicant Tracking & Resume Scoring

- * Intern Focus: Recruiter's view of applicants and initial screening tools.
- * Responsibilities:

- * Frontend UI for Recruiter to view applicants for their specific job postings.
- * Frontend UI for Recruiter to change application status (e.g., "Under Review", "Interview", "Reject"). This directly impacts Module 5.
- * Backend APIs for managing application statuses.
- * Tricky Part: Implement a Basic Resume Scoring System (backend logic) that takes a job posting and a resume, performs keyword matching, and assigns a score. Display this score on the recruiter's applicant list.
- * Crucial for: Recruiter's workflow and efficiency.

Module 7: Job Recommendation System & Saved Jobs

- * Intern Focus: Enhancing job seeker engagement through personalized suggestions.
- * Responsibilities:
 - * Backend API for the Job Recommendation Algorithm (basic content-based filtering based on job seeker profile skills, experience, and past interactions).
 - * Frontend UI to display recommended jobs on the job seeker dashboard.
 - * Frontend UI for "Save Job" functionality.
 - * Backend APIs for saving jobs and managing job alerts.
 - * Database schema for saved_jobs and job_alerts.
 - * Crucial for: Personalization and user retention.

Module 8: Admin Dashboard & Analytics

- * Intern Focus: Oversight, moderation, and data insights.
- * Responsibilities:
 - * Frontend UI for Admin Dashboard (separate login/route).
 - * Admin functionality for User Management (view, edit, deactivate, delete Job Seeker/Recruiter accounts).
 - * Admin functionality for Job Management (view all, edit, delete any job).
 - * Backend APIs to expose administrative data and functions securely.
 - * Tricky Part: Implement Admin Analytics Dashboard (backend data aggregation and frontend visualization using charting libraries). Metrics include user counts, job counts, application trends, popular skills.
 - * Crucial for: Platform maintenance and strategic decision-making.

Hope you all understand.

If You have any Enquiries Don't Hesitate to Contact Me / My team.

I will be available 24/7 For Solving your enquiries.
